

1. Print template.
2. Tape template to pumpkin, cutting slits on perimeter as needed to make template conform to curved pumpkin surface.
3. Using a push pin, poke holes around outline of gray areas of template. Alternatively, trace with a blunt pencil, pushing hard to make an impression on the pumpkin.
4. Remove template, being careful not to tear it.
5. Carefully carve out pumpkin at the outline you transferred, cutting around delicate or small details first; then move on to larger, more simple areas. The gray areas of the template will be carved away from the pumpkin, so use your template print-out as a guide.
